

Chapter 1 babel 1.1 japanese Package The japanese package defines macros for outputting headers and dates in Japanese. Figure 1.1: Example of a caption

- Here we switch to English. (The value of language is 0) Text processing with a computer can be done in a variety of ways. Properties and capabilities are determined less by the specific type of computer, but rather by the text processing program used. Is this English? — Yes. Is this German? — No. Is this Japanese? — Yes. ■ Because we are setting `\adddialect\@japanese0`, Japanese? becomes "Yes".
- Here we switch to German. (The value of language is 32) Text processing with a computer can be done in a variety of ways. Properties and capabilities are determined less by the specific type of computer, but more by the text processing program used. Is this English? — No. Is this German? — Yes. Is this Japanese? — No. ■ Note that the hyphenation has switched to German - old orthography. In the new orthography (ngerman), *Leis-tungs-fä-hig-keit* is broken down in a different way.
- Here we switch to Japanese. (The value of language is 0) Table 1.1: Example of a caption
- ■■ changes the display of dates from the default Gregorian "February 14, 2021" to the Japanese calendar "Reiwa 3, February 14th".
